

Kickoff session

Composable AI Hackathon 2026

Build the agents that connect intelligence, activation,
discovery, and commerce.

Monday 21 September 2026 7:30 AM PST

What the next 45 minutes covers

01	Welcome and why you are here	3 min
02	Guest speaker: lessons from the last hackathon	10 min
03	Loomi Connect: where the platform is today	3 min
04	The four platforms, and why they are together	3 min
05	What an agentic system actually is	6 min
06	The six tracks	4 min
07	Sandboxes, teams, and coaching	6 min
08	Prizes, judging, and how to submit	6 min
09	Your next 24 hours, then questions	4 min

This session is recorded. The replay and all slides are posted in Slack straight afterwards, so nobody in APAC misses anything.

10 minutes

From the people who did this last time

What they built, what broke, and what they would do differently with eight days and four platforms.

Vladimír Bogatyrev

Solutions Architect, Investown.cz

Mária Kaderová

CRM Specialist at Investown.cz

loomi

BY bloomreach

Concept to platform in four months

Loomi Connect is the MCP layer you will build against. It went from a hackathon concept to an open platform in four months, and it is open to everyone today.

Hackathon

900+ registrants, 80+ teams.
Around 25 submissions.

Early Access

Around 250 registered, 100+ onboarded. Production use, not a sandbox.

Ungated

No waitlist, no nomination.
Open to every customer and partner.

GA

Target 8 October. Enablement and pricing in flight.

Ungated today. You do not need a nomination or a waitlist place to build on Loomi Connect this week.

This is not traffic. It is work getting done.

149 structured tools over MCP, callable from any framework. The numbers below are real actions against live data, not page views or demo clicks.

203,697

jobs done

Real actions against live data

152+

people connected

Counted once, ever

61

organizations

Customers and partners

203

agents running

Persistent, autonomous

83% month-over-month increase in usage. This is the platform your agent will call, and it is growing while you build on it.

Connected by pipes. Not by context.

TODAY

Prebuilt integrations, each built once for a single purpose.

THE AGENTIC ERA

One contextual layer. No fixed use case, no fixed path.

Why these four, together

Activation and engagement

Customer context, journeys, Discovery. Required in every track.

AI platform and infrastructure

Gemini Enterprise to reason and generate. AI Studio to prototype, GCP to run it.

Commerce

Agentic Storefronts and the catalog, order, and inventory APIs.

Data intelligence and agents

Lakehouse signals and predictions. AgentBricks to host the agent itself.

The reference architectures for this do not exist yet.

Nobody has published what it looks like when a churn score becomes a personalised message, a recommendation, and a completed checkout in one autonomous loop. That is what you are here to build.

The qualification rule

Bloomreach, plus at least two more.

Your agent must touch at least three systems that each do real work at runtime.

Connecting one MCP and running a prompt chain does not qualify, however polished it is.

This is a qualification gate, not a scoring preference. Two systems is below the bar.

The submission ladder

Not a submission	1	You point a chat client at Loomi Connect and prompt it to build a campaign. Bloomreach is doing the work. There is no agent here.
Below the bar	2	Gemini writes copy and pushes it into Bloomreach. One model, one destination, one direction. Nothing reasons across systems.
Meets the bar	3	A churn score in Databricks wakes your agent, Gemini decides the message and the channel, Bloomreach activates it.
Strong	4	The same loop, and Shopify completes the purchase. The order event flows back and updates the customer profile.
Exceptional	4+	All four partner platforms plus a system you bring yourself: your ERP, an inventory feed, a support desk.

Three is the floor, not the target. The number is how many systems do real work at runtime.

The shape of a qualifying agent

1

Signal

Something changes

A Databricks score crosses a threshold, a Shopify cart is abandoned, a Bloomreach engagement pattern shifts.

2

Reason

The agent chooses

Gemini, AgentBricks, or your own model weighs the context and picks a path, a channel, and an offer.

3

Act

The world changes

A Bloomreach campaign fires, a Shopify order completes, search merchandising updates, a profile is rewritten.

4

Close

The next run is smarter

The outcome is written back to the Lakehouse or the customer profile so the next decision starts from it.

The platforms you pick for each stage are yours to choose, **as long as Bloomreach is one of them and at least three carry real weight.**

A worked example: the retention loop agent

01	Signal	Databricks Lakehouse + AgentBricks	Every 6 hours the agent queries high-value customers whose churn score crossed 0.65, and builds a context object.
02	Reason	Gemini Enterprise on GCP	Gemini writes a personalised retention message and picks the channel. Engagement is falling, so it recommends SMS first.
03	Act	Bloomreach	The agent calls the Agent with a campaign goal. It builds the 3-step scenario, content, timing, and control group.
04	Commerce	Shopify Agentic Storefronts	The customer browses and buys inside the conversation. No redirect, no re-authentication.
05	Close	All four platforms	The order event updates the Lakehouse, resets the churn score, and triggers the post-purchase journey.

Nine distinct integration points across four platforms. No single platform can do this alone. That is the whole idea.

Six tracks, one rule

Track		Platforms	Scope
T1	Predictive intelligence and activation	Bloomreach + Databricks + Google	Any
T2	Conversational commerce and checkout	Bloomreach + Gemini + Shopify (+ Databricks)	Commerce
T3	Grounded content and personalisation	Bloomreach + Gemini + Databricks	Any
T4	Identity resolution and entity agents	Bloomreach + Databricks + Google	Any
T5	Behavioral signal and intervention	Bloomreach + Gemini + Shopify + Databricks	Any
T6	Composable commerce orchestration	All four, required	Commerce

Bloomreach is required in all six. Tracks 2 and 6 are commerce-specific. Your submission names one primary track.

Everything you need is provisioned

You do not need an existing account with any partner, and you do not need to bring data.

Every environment is quota-based and sized for the build window, not for production.

Loomi Connect over MCP, and the platform APIs. Two paths, see next slide.

Auto Provision

Sandbox access to Gemini Enterprise, Google AI Studio, and GCP for hosting.

Self-Service

A development store, pre-loaded with a synthetic catalog and order history.

Self-Service

databricks

A workspace with a synthetic Lakehouse dataset and a pre-deployed sample agent.

Auto Provision

Claim yours today. Provisioning details and quickstart guides are in the welcome kit and in your platform Slack channels.

Bloomreach: two paths

Recommended

You are a Bloomreach customer or partner

Use your own environment, with a separate project created for the hackathon.

Full flexibility: no quota ceilings, your own data model, and settings your team already knows.

We provision it

You do not have a Bloomreach environment

We give you a quota-based environment, pre-loaded with synthetic data and ready for all six tracks.

Tell us during onboarding and it is provisioned for you.

Either way you get Loomi Connect. The difference is whose quota you are working inside.

Coming solo? You are not alone

You already have a team

Register together, name a lead, done. Nothing here applies to you.

You are coming solo

Tick the box during onboarding. We handle the rest.

01

During onboarding

Say yes, and tell us your experience level and what you want to work on.

02

Monday 21 Sept, kickoff

Team formation begins. Solo participants are grouped into balanced teams.

03

Within 24 hours

You are told your team, introduced in Slack, and your team gets its own channel.

04

Tuesday 22 Sept, day 2

Bloomreach runs a facilitated 45-minute first briefing. You do not organise it.

Team formation

Bloomreach will facilitate team formation. Participants who register without a team will be placed into a team by the organising team.

Facilitated by Bloomreach

Team formation is coordinated and completed by the organising team. No action is required from you.

Confirmed within 24 hours

You will be notified of your team and introduced in your own team channel in Slack.

Solo participants only

Teams that register together are unaffected and remain exactly as registered.

Teams are 1 to 8 people. You will know your team and have your channel within 24 hours of this session ending.

New to this? That is not a disadvantage here.

Being new to commerce, to agentic systems, or to this industry is not something to work around. On request, Bloomreach will coach you.

- **Ask during onboarding** and we factor it into your team placement
- **Or ask any time in Slack** during the build window
- **Available to everyone** solo-placed teams and self-formed teams alike

Two 30-minute sessions for the new teams

Once teams are formed, Bloomreach will run two 30-minute sessions. They orient you in the ecosystem and show you what is realistic to build inside the window.

Session 1: The ecosystem

How the four platforms fit together, where Loomi Connect sits, and what each system is genuinely good for.

Session 2: What you can build

What a qualifying agent looks like in practice, the shape of a realistic build, and where teams usually lose time.

We will show you the path. We will not teach you word by word. The build is yours.

The grand prize

Grand prize

Fully sponsored trip to

Edge Summit London

Winning team of up to 5 members, fully covered.

Airfare

Return flights for up to 5 team members

Hotel stay

Accommodation for the full conference

Conference pass

Sessions, workshops, networking

Ground mobility

Airport transfers and local transport

Team size cap: the trip covers 5 people. Larger teams coordinate with Bloomreach to confirm the 5 attendees.

Every valid submission earns a badge

A Credly digital badge, issued jointly by all four partners.

Verifiable, shareable on LinkedIn, and it recognises hands-on work across Bloomreach, Google, Shopify, and Databricks.

You do not have to win to earn it.
You have to submit.

Finish something imperfect and ship it. That is worth more than a perfect idea you never submitted.

How you will be judged

Five criteria, 25 points

Innovation and creativity	0 to 5
Technical execution	0 to 5
Business value and impact	0 to 5
Platform depth	0 to 5
Demo and presentation	0 to 5

How platform depth is scored

0	One system, or a static demo
1-2	Two systems, or a third that changes nothing
3	Three systems, each shaping the outcome
4	A genuine signal to action loop
5	Four or more, closed-loop, all load-bearing

Platform depth is where most submissions lose points. The gap between a 3 and a 5 is not more platforms, it is whether the loop closes and feeds back.

Who judges your submission

Every submission is judged by the same panel. Judges come from Bloomreach and from our partners, across three disciplines, plus one independent judge from outside the ecosystem.

Engineering

Judges the build. Does the architecture hold up, and does the agent run.

Product management

Judges the problem. Is the use case real, and is the decision worth making.

Product marketing

Judges the story. Is the value clear, and does the demo land in five minutes.

Independent judge

From outside this ecosystem. Not a partner, not a customer, not connected to us.

An independent judge is required, not optional. UK advertising rules (CAP Code rule 8.26) require a subjectively judged competition to include at least one demonstrably independent panel member. We did this last time and we are doing it again.

Submitting, and the demo video

Six required components

- 01 Project summary, max 500 words
- 02 Demo video
- 03 Architecture overview
- 04 Team details
- 05 Platform usage explanation
- 06 Responsible design note

Plus your system touch table. It is the first thing a judge checks against the three-touch rule.

Demo video: 5 minutes maximum

Executive context	30s
Solution overview	45s
Architecture walkthrough	60s
Core demo	75s
Platform depth	30s
Agent reasoning	30s

Total 4:30, leaving 30 seconds of headroom.

Deadline: Monday 28 September, 12:00 midnight PST. The submission link is posted in Slack that day, in #submissions and #announcements. There is no URL before then.

Before you close this tab

Your next 24 hours

- 01 **Join the Slack workspace** and set your display name to First Last, Team Name
- 02 **Claim your sandboxes** all four, today, not on Wednesday
- 03 **Pick a track** and say hello in your platform channels
- 04 **Solo? Watch for your team** you will be introduced within 24 hours

Build window closes Monday 28 September, 12:00 midnight PST. Results and closing ceremony: Thursday 1 October, 7:30 AM PST.
